MAXflex single redundant ....

Delivery content

LOCAL/CPU Unit
1 x MA1 local (CPU)
1 x wall power supply unit I 12V 2A (EU-plug or INT. plug)
1 x DVI - DVI cable 1,8m/5.9ft
1 x USB cable 1,8m/5.9ft
4 x rubber feet

REMOTE/CON Unit
1 x MA1 remote (CON)
1 x wall power supply unit I 12V 2A (EU-plug or INT. plug)
4 x rubber feet

All your upgrades for
MAXflex are unlocked

USB Memory
Analog VGA- transmitted as DVI
RS232
Sound analog in both directions as CD quality
Matrix Switching System up to 1000 endpoints
Upgrade to activate:
PoE Version (Switch supports PoE)

Mouse Glide &Switch

Than check your installation....

Quick Installation MAXflex Single  local / CPU – remote / CON

1. Connect the CON / Remote and the CPU / Local Unit to the included 12V 2A power supply.
2. Now connect the USB cable to a USB port on your PC and connect the other end of the USB cable to the CPU / Local Unit. Connect keyboard and mouse to the CON / Remote Unit.
3. Connect the CPU / Local and the CON / Remote Unit with a network cable.
4. Now connect the DVI cable to the DVI socket of the PC and the other end to the DVI socket of the CPU / Local Unit (PC-in).
5. Almost done! Connect the audio cable local audio/out to the PC audio/in and remote audio/out with audio cable to the microphone
6. Using a switch: Connect all endpoints to the switch. Ensure that all connections have a bandwith of 1Gbit/ sec. For video sharing the network has to support IGMP snooping.

3. Than check your installation....

Quick Installation MAXflex Dual  local / CPU – remote / CON

1. Connect the CON / Remote and the CPU / Local Unit to the included 12V 2A power supply.
2. Now connect the USB cable to a USB port on your PC and connect the other end of the USB cable to the CPU / Local Unit.
   Connect keyboard and mouse to the CON / Remote Unit.
3. Connect the CPU / Local and the CON / Remote Unit with a network cable.
4. Now connect the DVI cable to the DVI socket of the PC and the other end to the DVI socket of the CPU / Local Unit (PC-in).
5. Now connect the DVI cable to the DVI socket of the PC and the other end to the DVI socket of the CPU / Local Unit (PC-in 2).
   Then connect the monitor with the DVI cable to the CON / Remote Unit.
6. Connect PC audio/out with the audio cable to local audio/in. Connect audio/out via the audio cable
7. Almost done! Connect the audio cable local audio/out to the PC Audio in and remote audio/out with audio cable to the microphone
8. Using a switch: Connect all endpoints to the switch. Ensure that all connections have a bandwidth of 1Gbit/sec. For video sharing the network has to support IGMP snooping.
4. Check the LEDS to get more information....

<table>
<thead>
<tr>
<th>Error</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>LED is not lighting</td>
<td>The devices get no power</td>
<td>Is the power supply connected? (white box)</td>
</tr>
</tbody>
</table>
| LED is lighting in red | No connection between Loc and Rem              | Check if the RJ45/network cable is connected well. (Clicking noise when plugging in)  
Control both, if it does not work please send an e-mail to support@kvm-tec.com |
| LED is lighting in orange | No picture on the monitor                      | Check if the local/CPU (PC) cable is connected well.  
Check if the remote/CON (monitor) cable is connected well.  
If everything is connected well but no function appears, reconnect power supply again.  
If the menu is visible, press the O key and choose the resolution of the monitor. Then press the assigned number on your keyboard. |
| LED is lighting green  | Screen occurs but the keyboard is not working | Plug out/in USB of keyboard and wait until driver is installed (after few seconds).  
Check all USB connections on both sides (Local and Remote)  
If it is still not working, plug out/in DC once more |
| LED is lighting green  | No audio                                       | Establish audio connection:  
plug stereo-jack to the audio output of the PC (green) connection with local: IN  
remote: headset OUT  
Establish microphone connection:  
plug stereo-jack to the microphone input of the PC (pink) connection with local OUT |
| LED is lighting green  | The screen flickers, has an incorrect display  | Install current firmware from our homepage www.kvm-tec.com/support/framework-download |
| LED is blinking green  | Different firmware or USB is not compatible    | e-mail to support@kvm-tec.com                                             |
| LED are lighting differently | Different firmware                          | To enter on screen menu/check firmware version:  
To enter the On screen menu, press the Scroll Lock key five times in quick succession. The currently installed firmware version is displayed below the menu  
If firmware update does not work, please send an e-mail to support@kvm-tec.com |
5. Your Extender....

No Power (No LED)
- Check the powerplug
- Is the power supply ok? Try another Unit.
- Try reprogramming the Unit by using a JTAG programmer
- Contact kvm-tec support

USB is not working
- Are the USB Devices plugged in correctly?
- Is the USB cable on the Local side plugged into the PC?
- Are the USB Devices working directly on the PC?
- Replace the USB cable from PC to the Local Extender
- Check if local and remote Unit have the same firmware
- Check if the local or the remote Unit is causing the problem by swaping first the local and then the remote Unit to another Unit
- Contact kvm-tec support

No Video
- Check if all cables are plugged in correctly
- Check if the PC is sending a image by plugging in a monitor on the local out of the local Unit
- Check if the DDC is set correctly (in menu under point ,O")
- Check if both Units have the correct firmware
- Contact kvm-tec support

Video error (stripes in the picture)
- Check if all cables are plugged in correctly
- Check if the PC is sending a image by plugging in a monitor on the local out of the local Unit
- Check if the DDC is set correctly (in the menu under point ,o")
- Check if local and remote Unit have the correct firmware
- Check if the network switch is setup correctly and has enough bandwidth
- Check if other units have the same behaviour
- Contact kvm-tec support

Check if all cables are plugged in correctly
- Check if the PC is sending a image by plugging in a monitor on the local out of the local Unit
- Check if the DDC is set correctly (in menu under point ,O")
- Check if both Units have the correct firmware
- Contact kvm-tec support

Check if the network switch is setup correctly and has enough bandwidth
- Check if other units have the same behaviour
- Contact kvm-tec support
6. Check the firmware version ....

To view the firmware version
Make sure the main menu is open. The currently installed firmware version of the remote and local units are displayed (e.g. ‘4267’) and check that you have the same firmware on both units.

Ways to update the firmware version ....
There are four ways to perform an update:

- UBS stick update

how to update the firmware

To perform a firmware update
Make sure that the main menu is open.
Press U to update the USB flash drive.

Update Service with kvm-tec Switching Manager Demoversion ....

This is a comfortable update management for your switching system.
You can update all extenders at the same time. The update is performed in the background and in a second step the units are rebooting with the new firmware.
Only a short time is needed for the second step.

ATTENTION! Only when the bar is grey, the update is finished.
Checklist....

- identify your extender
- first check your delivery content
- are all needed upgrades are unlocked
- all cables are connected and all units are switched on
- check the LED status
- Video - check if the DDC is set correctly (in menu under point „O“)
- USB - are all cables connected
- in case of issues check the firmware version (download for the newest firmware kvm-tec.com/support)

If everything is working fine - perfect

Tipps from our engineers for engineers

- reduce the setting of your system and set up only one local and one remote at the same place
- connect the monitor directly to the PC - does the monitor display an image? (follow the mentioned steps from above)
- LED status is red or blinking - this can be a cable problem - try to get a short patchcable and to connect the units and be sure that it’s not a cross-over cable
- USB problems with mouse and keyboard - please try a different type of mouse and keyboard

Further expert tipps for issues

- Adapter - our units are transmitting DVI signals. If you are using adapters try a PC with DVI signal
- PC - please try another machine
- If you have more sets please make a cross check and change of the units

Further steps

Please, fill out the support form and contact our support team +43 2253 81912 - 30

Problem description

Other connected devices (Switches, HUBs, Touchscreens, Webcams,.....)

Almost done! If you want to be even faster on the phone, the following data would be helpful:

- No power
- Stripy screen
- LED Status local/CPU
  - red
  - orange
  - green
  - glowing
- No Link
- No Video
- LED Status remote/CON
  - red
  - orange
  - green
  - flashing
- VGA problem
- No USB
- No connection
- Mouse/ Keyboard doesn’t work
- DOA (dead on arrival)
